

Business Requirements Document (BRD)

AllSchoolsColleges — Admissions & Growth Analytics Platform

Document Version: 1.0

Document Status: Final

Project Type: Business Intelligence & Analytics

Primary Tools: Google BigQuery, SQL, Power BI, DAX, Python

1. Executive Summary

AllSchoolsColleges requires an analytics solution that provides a consolidated view of its **lead generation, admissions, enrollment, marketing, school and regional performance**.

The proposed solution will bring together operational and marketing data into an analytical environment using **Google BigQuery**, perform business analysis using **SQL**, and provide an interactive **Power BI dashboard** for management and business users.

The solution is designed not only to report historical performance but also to help stakeholders identify **lead-quality issues, high-performing schools and regions, marketing opportunities and future targeting priorities**.

2. Business Background

AllSchoolsColleges operates across multiple schools and educational institutions and generates student leads through different acquisition channels, including **Organic and PPC/Paid Search**.

The business needs visibility across the complete student journey:

Lead → Qualified Lead → Application → Enrollment → Student Fee → Commission

The available data contains information relating to leads, applications, enrollments, PPC performance and school-level activity. The source data includes school identifiers, student identifiers, dates, lead sources, application statuses, enrollment statuses, fees and marketing performance metrics.

3. Problem Statement

The business requires a centralized analytical solution to answer questions such as:

- How many leads are being generated?
- Which acquisition sources generate better-quality leads?
- How effectively are leads progressing to applications and enrollments?
- Which PPC campaigns generate the strongest outcomes?
- Which schools and regions perform best?
- How much marketing spend is being used to generate enrollments?

- What is the revenue and commission opportunity generated by enrollments?
- Which schools and regions should receive greater focus?

Without an integrated analytical view, stakeholders may need to evaluate multiple datasets and reports separately, making it difficult to identify performance trends and growth opportunities.

4. Business Objectives

The project aims to:

1. Create a centralized view of business performance.
 2. Monitor the complete lead-to-enrollment funnel.
 3. Measure lead quality across acquisition sources.
 4. Evaluate PPC and campaign performance.
 5. Analyze enrollment and application performance.
 6. Compare school, state and regional performance.
 7. Measure marketing efficiency.
 8. Calculate commission revenue from student fees.
 9. Identify high-performing schools and regions.
 10. Support data-driven school and regional targeting decisions.
-

5. Stakeholders

Stakeholder	Business Need
Senior Management	Overall business and growth performance
Marketing Team	Campaign, PPC and lead-source performance
Admissions Team	Application and enrollment funnel
Sales / Business Development	School targeting and lead opportunities
Regional Management	State and region-level performance
Finance / Management	Revenue and commission analysis
Data / BI Team	Data processing, analytics and reporting

6. Project Scope

In Scope

Lead Analytics

- Lead volume
- Lead sources
- Lead quality
- Lead trends
- Lead conversion

Admissions Analytics

- Applications
- Application status
- Enrollment
- Enrollment trends
- Withdrawal analysis

Marketing Analytics

- PPC spend
- Impressions
- Clicks
- Campaign performance
- PPC applications
- PPC enrollments

The PPC source specifically contains monthly impressions, clicks, spend, leads, applications and enrollments at school/campaign level.

School & Geographic Analytics

- School performance
- State performance
- Regional performance
- Enrollment by geography
- Top-performing schools

Growth Analytics

- Commission revenue
- Commission per enrollment
- Marketing efficiency

- Lead-quality opportunities
 - Priority schools
 - Regional targeting opportunities
-

7. Out of Scope

The following are outside the current project scope:

- Automated student communication
 - CRM implementation
 - Automated campaign execution
 - Payment processing
 - Student application processing
 - Predictive enrollment forecasting
 - Automated lead scoring using machine learning
 - Real-time operational alerts
-

8. Business Requirements

ID	Business Requirement	Priority
BR-001	Management shall be able to monitor total leads, applications and enrollments.	High
BR-002	Users shall be able to analyze leads by acquisition source.	High
BR-003	Users shall be able to evaluate lead quality.	High
BR-004	Marketing users shall be able to analyze PPC campaign performance.	High
BR-005	Users shall be able to evaluate marketing spend against outcomes.	High
BR-006	Admissions users shall be able to monitor application and enrollment performance.	High
BR-007	Management shall be able to analyze enrollment performance by school.	High

ID	Business Requirement	Priority
BR-008	Management shall be able to compare state and regional performance.	High
BR-009	Management shall be able to identify top-performing schools.	High
BR-010	Management shall be able to calculate revenue generated through student enrollments.	High
BR-011	Management shall be able to estimate commission revenue from applicable student fees.	High
BR-012	Management shall be able to identify schools and regions with growth opportunities.	High
BR-013	Users shall be able to filter and interact with dashboard results.	Medium
BR-014	Users shall be able to compare performance across time periods.	Medium

9. Key Performance Indicators

The dashboard should provide visibility into the following KPIs:

Acquisition

- Total Leads
- Qualified Leads
- Lead Quality Rate
- Lead Conversion Rate
- Lead Source Performance

Admissions

- Total Applications
- Total Enrollments
- Enrollment Rate
- Free Enrollment Rate
- Withdrawal Rate

Marketing

- Marketing Spend

- PPC Leads
- PPC Applications
- PPC Enrollments
- Cost per Enrollment
- Campaign Performance

Revenue

- Total Student Fees
- Commission Revenue
- Commission per Enrollment
- Marketing Spend / Commission
- Commission ROI

10. Business Rules

BR-Rule-001 — Commission

Commission revenue is calculated as:

$$\text{Commission Revenue} = \text{Applicable Student Fees} \times 10\%$$

The enrollment source contains fee_amount and enrollment status, providing the underlying fee information used for financial analysis.

BR-Rule-002 — Enrollment

An enrollment is considered successful when the enrollment record has an **Enrolled** status.

BR-Rule-003 — Withdrawal

A record with **Withdrawn** status is treated as a withdrawal for enrollment analysis. The source contains both Enrolled and Withdrawn statuses.

BR-Rule-004 — Lead Quality

Lead Quality Rate is calculated as:

$$\text{Qualified Leads} \div \text{Total Leads}$$

BR-Rule-005 — Marketing ROI

Commission ROI is calculated as:

$$(\text{Commission Revenue} - \text{Marketing Spend}) \div \text{Marketing Spend}$$

11. Reporting Requirements

The Power BI solution shall provide five analytical areas:

Page 1 — Executive Overview

Provides an overall view of business performance and key KPIs.

Page 2 — Admissions Performance

Focuses on applications, enrollments, enrollment rates and withdrawals.

Page 3 — Marketing Performance

Focuses on lead sources, campaigns, PPC performance, marketing spend and acquisition efficiency.

Page 4 — School Performance

Focuses on school, state and regional enrollment performance.

Page 5 — Growth & Targeting Strategy

Focuses on commission opportunity, lead quality, regional opportunities and priority schools.

12. Success Criteria

The project will be considered successful when:

- Business users can access a centralized performance dashboard.
 - Lead-to-enrollment performance can be analyzed.
 - Marketing sources and campaigns can be compared.
 - School and regional performance can be evaluated.
 - Commission opportunity can be calculated.
 - Users can identify potential priority schools and regions.
 - Dashboard metrics are consistent with the underlying analytical data.
 - Users can interact with filters and analyze performance across relevant dimensions.
-

13. Assumptions

1. The available datasets are suitable for analytical reporting.
 2. Student fee amounts represent the applicable fee value for enrollment analysis.
 3. The agreed commission rate is **10%**.
 4. Lead source information is available for lead-level analysis.
 5. School identifiers can be used to associate operational and marketing records.
 6. PPC performance is represented through the fact_ppc_performance dataset.
 7. Dashboard users have appropriate access to the underlying reporting environment.
-

14. Risks & Limitations

Risk / Limitation	Impact
Missing campaign IDs	Campaign-level attribution may be unavailable for some leads
Incomplete lead information	Can affect lead-quality analysis
Withdrawn enrollments	Can affect net enrollment interpretation
Data quality issues	May affect KPI accuracy
Attribution limitations	Marketing performance may not represent complete customer journeys
Historical data limitations	Trends may be affected by available time periods

15. Expected Business Outcomes

The solution is expected to provide:

Better visibility

A centralized view of admissions and marketing performance.

Improved marketing decisions

Identification of stronger acquisition sources and campaigns.

Improved admissions management

Visibility into funnel performance and enrollment outcomes.

School-level intelligence

Identification of high-performing schools.

Geographic intelligence

Comparison of state and regional performance.

Financial visibility

Understanding of student-fee and commission opportunities.

Growth planning

Identification of schools and regions that may warrant greater targeting and business attention.

16. Business Value

The key value of the solution is its progression from **descriptive reporting to decision support**.

What happened?

Why did it happen?

Where is performance strongest?

Where is the opportunity?

What should we focus on next?

The final Power BI solution therefore acts as a **business decision-support platform**, connecting marketing activity, lead quality, admissions performance, enrollment, fees and commission opportunity into one analytical framework.
